

Background

Redrow Homes is one of the UK's leading house builders with thirteen divisions building high quality housing developments across the UK.

The company is committed to building sustainably with this corporate promise delivered through a wide range of initiatives that include responsible waste management.

Always looking for innovations that the company can adopt to improve the sustainability of their homes, Redrow Homes identified Hazibags as a more environmentally responsible and safer way to contain and transport the company's hazardous waste.

Managing waste on site

Redrow Homes is using Hazibags on two housing developments in Essex: St Nicholas Mews in Basildon and Oaklands Park in Thundersley.

The 200litre bags are used for CoSHH waste generated during the build including paint tins, sealants, aerosols and mastic tubes.

Benefits of Hazibags

Redrow Homes is benefitting from Hazibag in the following ways:

- The flat-packed Hazibags are easy to store and readily available on site whenever they are required
- Highly visible, the Hazibags help ensure correct segregation of hazardous wastes
- Hazibags are UN approved which clearly communicates Redrow Homes commitment to responsible waste management

Client feedback

“We identified Hazibag as an industry innovation that could help us manage our waste better and this has definitely been our experience when using them. Hazibags are helping Redrow Homes meet our commitment to building sustainably and we will continue to use the bags on our forthcoming developments.”
