

Balfour Beatty : HAZIBAG Hazardous Waste Disposal Bags

Benefits:

- Easy and convenient storage
- Cost of delivery (depending on quantity) is less than £1
- UN approved
- Suitable for restricted access areas (e.g.: TBM)
- No secondary handling
- Once tied, bags are rain-proof thanks to secondary lining

INSPIRATION Hazardous waste collection is a service which almost every construction site must hire. On projects such as Crossrail compliance with environmental standards and regulations is at the top of the agenda, and with some of the sites being heavily contaminated with asbestos and other hazardous waste, storage and disposal of such material can be costly.

INNOVATION Balfour Beatty have engaged with Hazibag UK, and are trialing a number of HAZIBAGs at Plumstead. These UN-approved, flat-pack bags are ideal for containing solid hazardous waste such as empty paint pots, asbestos, used spill kits, aerosol cans, and a variety of other construction waste which cannot be disposed of with general waste. A major benefit over other waste storage containers is that the bags take so little space when not in use, and when full, can be conveniently and safely stacked to save space. The strong but lightweight material HAZIBAGs are made from contributes to a great saving in delivery cost, as well as to the overall environmental impact of transportation (e.g.: 70% reduction in CO2 emissions).

ADDITIONAL INFORMATION

- HAZIBAGs come in a variety of sizes, from small 200l bags up to 3m³
- Bags come as flat-pack, so they can be sent via post (next day delivery)
- 1 pallet of HAZIBAGs can contain up to 64 empty bags (as opposed to only 4 drums)
- Cost of a 200l bag = £35 (bulk orders are discounted)
- Cost of a 1000l bag = £65 (great value)
- There are 4 secure lifting points for safe manoeuvring of the bags once full
- The bag material can withstand up to 1 tonne of load, and the zip for the flap up to 0.5 tonne.
