

Are you disposing of your hazardous waste compliantly?

Everybody on this site is responsible for ensuring that we dispose of our hazardous waste compliantly. Follow this quick guide and make sure you play your part in making this a safe and compliant site.

HAZIBAG

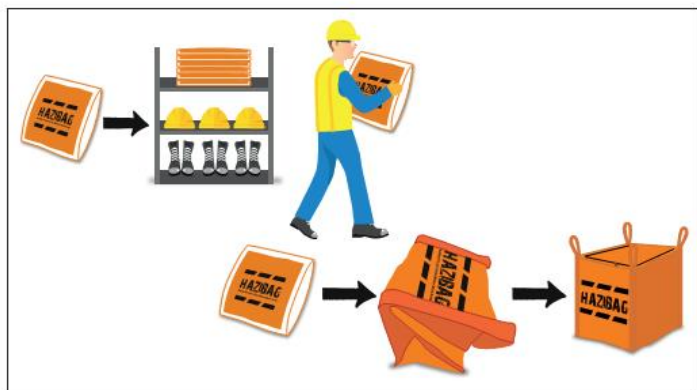

1. Regulations require the segregation of hazardous wastes, not just from non-hazardous waste but in many instances from each other.

On this site, we use Hazibags for our solid hazardous wastes. **Under no circumstances should hazardous waste ever go into general waste.**

2. Hazardous waste includes:

- ✓ Used aerosols
- ✓ Used resin containers
- ✓ Used mastic tubes
- ✓ Used adhesive containers
- ✓ Contaminated soil
- ✓ Asbestos
- ✓ Japanese knotweed

3. Hazibags come flat-packed so we keep a store of them on-site to ensure they are instantly available.

To use one, just open up the sealed plastic bag, pull out the Hazibag, puff out the sides and fold the liner over them.

Each Hazibag comes with detailed instructions for use attached to the sealed bag in a clear plastic pocket.

4. Visual identification labels for the side pocket of your Hazibag can be downloaded and printed off at;

www.hazibaguk.com/download

5. When not in use, fold in the top of the liner and close the zip to protect the waste from the elements.

6. When ready for collection Hazibags can be stacked safely - call us on 01708 55 99 66 for collection
